SmartComm Gateway

SmartComm Gateway

By the intelligence of **SmartComm Gateway** in searching data from base and sending SMS automatically to inform message such as insurance policy paid warning, or on due payment for services charged, your significant messages can quickly, easily be delivered to receivers, just click!.

Moreover, it helps you on time saving, and operating expense control by automatic work mechanism which supports your requirement to inform message on proper time.

Smart Comm Gateway Working system

Just you link **SmartComm gateway** to your database, then design format you need, when the time of setting terms shows up, system of **SmartComm Gateway** will search for data from your database and send informed message automatically under your setting terms.

Easy to Integration & Deployment

SmartComm Gateway has been designed to easily connect to general data on system, you just prepare some information needed to use readily, SmartComm Gateway system will automatically manage your work

Data Validation

By the intelligence of SmartComm Gateway, will helpfully inspect the correction of data before sending. This is to help you not to lose the unreasonable expense from mistakes such as "telephone number data" will be inspected for correction, being hand phone numbers? or long distance number, if receiver's number is not correct, the system will sort out those numbers.

Message Category

You can specify the type of the message such as Promotion, Reminder, Birthday etc, which increases the convenience in managing the template and being so useful for issuing reports by categorizing.

Template Message Design (Advance Edition only)

You can design messages needed to send, you just create template, and then create conditions and format aligned with your requirement.

SmartComm Gateway will facilitate SMS sending for you automatically.

Defiffiine Schedule Time to Read Text File

The SmartComm Gateway can be specified the time period to read the file in the specified folder such as reading every 5 minutes. Moreover, the file reading time can be set up such as to read the file from 8.00 AM-05.00 PM Monday to Friday except for Saturday and Sunday etc.

Logging & Report

There is the filing sent data system together with the report display system which will simply show you the history of use and adoptable clear for improvement of using way for SmartComm Gateway system in the future.

Flexible Text File Format

SmartComm Gateway effectively supports many types of file format such as text file that uses "," (comma) or tab between the data in the file etc.

Retry Sending SMS Automatically

In the case of disconnection problem with SMS Server, sending of SMS was not achieved in that time, the system would retry to send that file every 5 minutes. The Retry would not make the repeated sending of the file because there would be Reference ID inspection every time. The program can inspect the message file that it is the same as the file that has been sent during the specified time or not by inspecting from the size of the file and the Hash Function of that file

Protect Duplication File

The SMS text can be previewed before sending in order to prevent mistakes and the repeated number of mobile and sending message would be inspected and protected automatically by this function.

Window Service Process

This program can work automatically after the Start Windows without login of user.

Email/ SMS Report to System Admin

The system would send an email or SMS to a receiver when there is a specified incident such as On Error found that being wrong format of the file or the delivery problem etc.
